Included with Purchase

- Golight Searchlight
- Dash-Mount Remote Control (with quick connects)
- 20' 6 Wire Cord with Positive & Negative 12 Volt Wire
- Permanent Mounting Gasket
- Screws and Caps

Wiring Diagram

MOUNTING INSTRUCTIONS

Determine where you want to mount the dash remote. Create an opening for the wires and insert the dash mount remote with correlating quick connect power wires. Connect the power wires to 12v D.C. Screw in the dash mount remote to secure it in place.

The 12 Volt DC power wire should be joined to the leads on the 20' cable with appropriate automotive attachments. The (+) lead of the Golight is marked with a red tag. The power should be fused at 15 amps and be on an ignition switched circuit if possible.

Now determine the location for mounting the light itself. Create an opening for the light cord. Make sure to place the gasket onto the bottom of the Golight before proceeding. Now attach the correlating quick connect from the remote to the Golight through the hole created. Use a silicone sealant to fill in the hole to help prevent moisture and other environmental effects from affecting the wiring.

Place the Golight onto your designated mounting area and mount the light base to the surface with the screws provided. Cover the screws with the four caps.

OPERATION

Operation of the Golight is simple and easy. Use the toggle switch on the right to turn the light on. With the joystick on the left you are able to pan the light left to right and tilt up and down. When not using the light turn the power back off.

Safety Warnings and Ratings.

For personal safety, always follow the safety instructions in this manual to ensure safe and long-term use. Failing to do so can result in damage to the product or serious bodily injury

Warnings
