

Weatherproof Junction Box 8"x 8"x 4" - Corrosion Resistant Plastic Molding Construction - NEMA 6P Instruction Manual

Do not attempt installation until you are familiar with all procedures outlined within this instruction sheet.

INSTALLATION

The WPJB-8.8.4-N4 from Larson Electronics is a weather proof junction box that provides operators with a UL listed NEMA 6P and NEMA 4/4 rated enclosure designed to hold electrical equipment up to 8" by 8" by 4" in size. This weatherproof junction box is constructed from a plastic moulding compound that will not rust or corrode along with a foam gasketed lid sealed with stainless steel screws.

When mounting this weatherproof junction box, begin by finding a suitable location for mounting the box. This should be a flat surface. Mount the box to surface using the 4 mounting ears on the back. ***DO NOT over tighten screws as the plastic can break!***

There are four screws holding the cover. Remove these screws and set the cover aside to access the inside. Install electrical equipment/accessories as required. Thru-holes can be drilled through the box for wiring. It is recommended to use spur-point bits and a slow speed when drilling holes.

Use approved wiring methods and cord grips to ensure box remains weatherproof. Follow all local, state, NEC electrical codes for the area.

Replace top cover. Top cover must remain in-tact during operation.

WARNING

Disconnect power to any electrical equipment before performing maintenance inside box!

THESE INSTRUCTIONS MAY NOT COVER ALL DETAILS OR VARIATIONS OF THIS PRODUCT FOR YOUR EQUIPMENT OR INSTALLATION REQUIREMENTS.
