

(1)

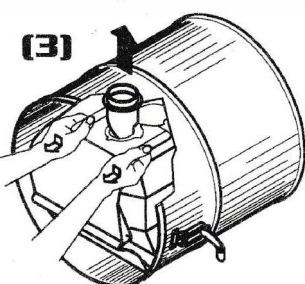

To Install Bag

Expand bag pleats, grasp the scored cardboard ends and pull forward completely onto inlet tube as close to the tank wall as possible.

(2)

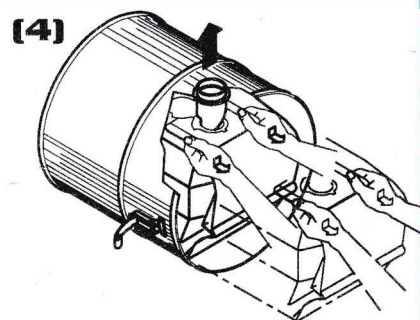

Position the cloth filter assembly on the tank, replace motor head and close clamps.

(3)

To Remove Bag

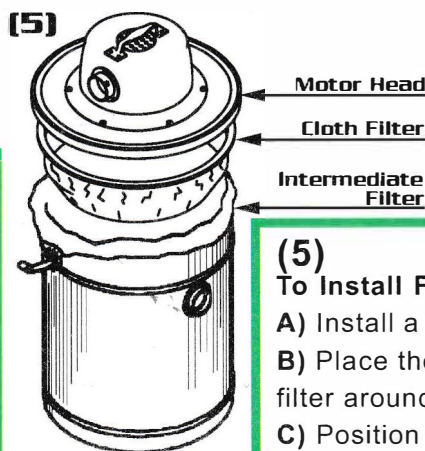

Remove motor head and cloth filter assembly, set aside. Lay tank on its side with inlet tube on top.

(4)

Push bag tab off the inlet and pull bag out of the tank, using care not to puncture bag with inlet tube. Secure push and seal closure.

Install fresh
NEW filter bag.

(5)

To Install Filter

- A) Install a disposable filter bag.
- B) Place the intermedia filter around the tank perimeter.
- C) Position the cloth filter assembly on the tank and replace motor head.

Filter Systems and Disposable Filter Bags Operating Hints

1. For clean, safe efficient operation of this vacuum cleaner whenever the bag is 3/4 full, to maintain maximum suction power replace it with a fresh NEW disposable filter bag. (The cloth filter assembly is a protection and support for the disposable filter bag and MUST always be in place.)
2. All filters gradually clog as they are in constant use, causing cleaning efficiency to drop. Extremely fine particles such as cement, powder etc., may clog the bag before it is 3/4 full. If this happens the suction can be revived by opening the vacuum and shaking the bag (without disconnecting the vacuum). This will shake off dust film clogging the inside surface of the filter bag, restoring cleaning power.
3. DO NOT operate this vacuum cleaner with ONLY the cloth filter assembly. If this happens and the cloth filter becomes dirty, it should be brushed or vacuumed thoroughly to remove imbedded dirt. Otherwise, the suction efficiency of your vacuum will be impaired.

CAUTION

When cleaning soot, caustic or similar material, bags should be changed daily and not left in vacuum overnight. Damp air and soot may generate acid, which could cause bag breakage.
