EXP-DFL-LED

OPERATING INSTRUCTIONS

1. Unscrew light head to expose battery chamber
2. Insert three (3) AA size batteries with Positive (+) pole up facing light head.
3. Replace light head and screw on body until third seal is covered. Light is now ready to use.
4. To turn on, continue screwing light head until light illuminates.
5. To turn off, slightly unscrew light head until light goes out.

NOTICE

- For best performance, use only high quality batteries. If storing for long periods of time, we recommend using lithium batteries that have a 10 year shelf life.
- If inadvertent flooding occurs, immediately flush with clean water and leave light unassembled to allow drying. Never insert batteries in wet battery chamber. Salt water corrosion voids warranty.
- Keep seal lubricated with silicon based lubricant, to assure proper sealing. Replace seals if chaffed, cracked or broken.
