SL4-A-LED

WIRING

The SL4-A-LED is operated on 10 to 30 volts DC and are wired by using three wires; red, white, and black.

- **Black:** Steady Burn
- **Red:** Strobe
- **White:** Ground

These lights may be wired with an inline switch to control on/off operation, as well as switching from steady burn to strobing.

MOUNTING

Included with this unit is a black plastic gasket with preformed holes to allow simple permanent mounting to any flat surface.
