

LEDPL-5-UV395-PK Charging the Battery

Follow the steps below for charging the battery after removing it from the flashlight.

1. Match the polarity of the charger to the battery.
2. Firmly press the battery into the charger. This can be difficult at first but will ease up over time. It will eventually push in.
3. Plug either the 120V wall charger or 12V car plug into the charger and power source.
4. A red light illuminates indicating the battery is charging.
5. Once charged, a green light illuminates indicating the battery is done charging and ready for use.
6. Unplug the charger from its power source.
7. Pull the battery out of the charger. It is easiest to pull from the top “(+) side” or carefully use a flat head screwdriver to pry it out if necessary.
8. Insert the battery into your flashlight.
9. Store the battery charger in a cool dry area.
