

Larson Electronics PWM-SGV Dimmer for LEDP Series Light Bars

Both the LED light AND the PWM-SGV require VDC power supplied to them.

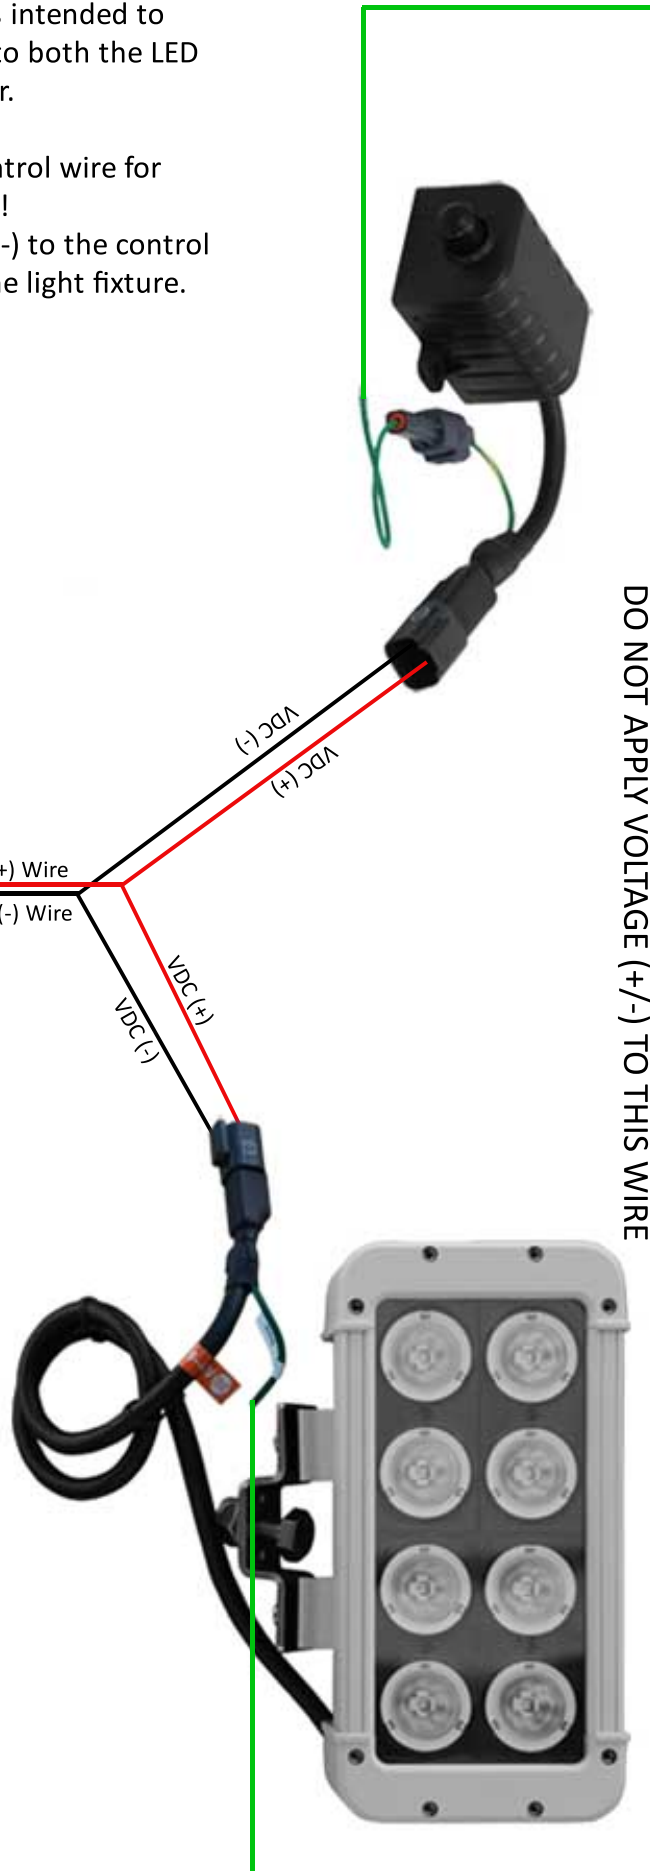

The provided Y-Splitter is intended to split off the power wire to both the LED light and PWM controller.

The green wire is the control wire for dimming purposes ONLY!
DO NOT connect VDC (+/-) to the control wire. This will damage the light fixture.

Power Source

9-42 Volts DC
OR
AC-DC Power Transformer

9-42V DC Positive (+) Wire
9-42V DC Negative (-) Wire
