EXPRA-06R-LED

WARNING:

- To reduce the risk of explosion do not mix old batteries with used batteries from different manufacturers.
- To reduce the risk of ignition of a flammable or explosive atmosphere, batteries must be changed only in a location that is known to be non-hazardous.
- Do not charge Li Battery Pack in hazardous locations.

OPERATION:

Proper care of your new light is essential in order to get a long dependable life of service.

The battery pack provides 4 hours of continuous run time with a 5 hour charge.

NOTE: In order to get the longest runtime out of your new flashlight, the unit must be fully charged before its first use.

- The rechargeable battery pack inside the right angle LED light is designed to be charged inside the flashlight. Removing the Li-ion battery pack from the light is not necessary. Simply slide the light down on the charger base until the light snaps in place. The light is held firmly in place.
- Once the flashlight is in the charging base, the charging indicator on the front of the light will turn RED, indicating the unit is charging. In order to get the longest runtime out of your LED light, leave the flashlight on the charger until the charging indicator turns green.
- Once the charging indicator has turned green, remove the light from the base by pressing the latch behind the light and simultaneously pulling the light upward. Once the light has moved upward approximately $\frac{1}{4}$ ", the latch can be released and the light can be safely removed.
- A push-button switch on the side of the flashlight near the top turns the light on and off. A belt clip and D-Ring allow for hands-free operation.

SAFETY:

- Before using your light in a potentially hazardous location, please read the safety approvals.
- **WARNING** – Do not use any charger base or battery pack, other than the ones that are shipped with the unit.
