

HAL-24-16W-LED-ILS-1227

LED Strip Light for Hazardous Location Lighting

INSTALLATION

This light fixture can run on voltages of 120V-240 AC.

1. Mount fixture in desired location using 1/4" screws (not included).
2. To position, loosen the mounts at the ends, adjust fixture to desired angle, and re-tighten to hold in place.
3. Run cord and plug into matching receptacle within operating voltage. The field wiring terminations are to be made following acceptable practices as outlined by the NEC/CEC for either the specific ordinary or hazardous locations as dictated by the installation location.
4. Energize luminaire and toggle power switch ON to illuminate light.

RECEPTACLE/PLUG OPERATION

Electrical connection between receptacle and plug is accomplished after plug fully inserts into receptacle and rotated clockwise.

1. Lift receptacle door and locate polarization on mating plug pin and receptacle face. Insert plug straight all the way into receptacle until it cannot go further.
2. Rotate plug clockwise limit (37°), this closes internal contacts and completes circuit. This also mechanically locks plug into receptacle so it cannot be pulled out.
3. To remove plug, push plug inward and turn to counterclockwise, pull plug straight out.

**See drawing for mounting dimensions.*

Features

20 Watts
120-240V AC
50,000+ Hour Life Expectancy

Voltage: 120V-240V AC
Beam Type: 100° Flood OR 30° Spot
Color Temp: 5000K, 4000K or 3000K

Loosen bolt to adjust to desired angle.

MAINTENANCE

Caution: To avoid personal injury, disconnect power before performing maintenance.

Perform visual, mechanical and electrical inspections on a regular basis. We recommend routine checks to be made on a yearly basis. Frequency of use and environment should determine this. It is recommended to follow an Electrical Preventive Maintenance Program as described in NFPA 70B: Recommended practice for Electrical Equipment.
