

**LED Flood Light w/ Magnetic Base - Compact Design - 0.5 Amp Draw - 32 LEDs - 500 Lumens - 12 VDC**Part #: [LEDCR-32-M](#)

Small yet powerful LED Flood light. Can be used to illuminate wide areas with pure, white LED light. Produces 6 Watts while drawing only .5 amps. The flood beam angle of emission is equal to 120 degrees. This means that a wider, softer area of illumination will be emitted closer to the fixture rather than several hundred feet away such as it's spot counterparts.

This LED fixture is IP68 rated and has a life span expectancy of 50,000 hours. This means, when ran all day, every day, it would take almost 6 full years before a problem with the LEDs would occur. The LED flood light comes standard with a 100lb. grip magnetic mount. This particular light has been tested up to 50mph. This means operator can mount to flat surface on his/her vehicle and safely drive up to 50mph without the magnet giving way.

A 16 foot coiled cord is also included with the fixture so that the operator can quickly and temporarily plug into a 12 volt plug (cigarette plug-in) for faster and easier installation and removal of the LED emitter. This LED light operates on 12V DC.
