R-3B

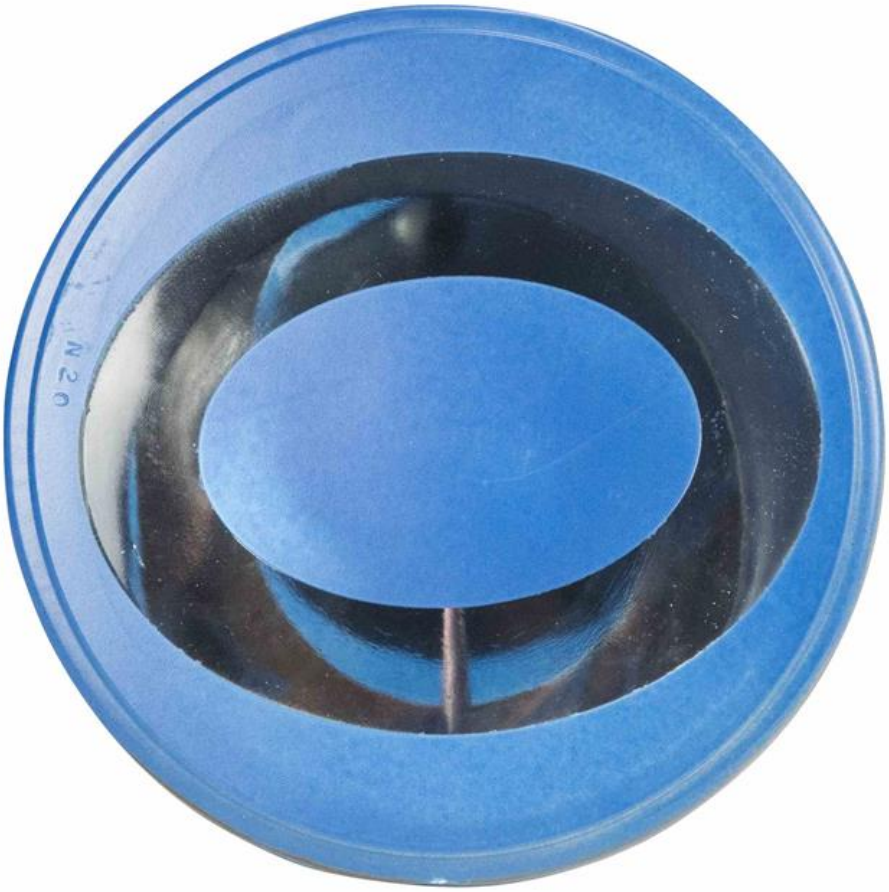

R-3B Replacement Blue Eye Spot Lamp for HML-3B and ML-3B Spotlights

Product ID: 17

Larson Electronics LLC manufactures a wide variety of products, including custom built to spec designs. The pictures displayed for this unit are a general representation of form factor for the product line and may not accurately represent this exact configuration in every detail due to custom builds and changes between similar products in our standard catalog. The specifics for this configuration are listed in the specification table and supporting documentation (CAD files, Dimensional Drawing, Name Plate Diagram, Wiring Diagram, etc.). This means that specific details (receptacles, plugs, wires, connections, mounting brackets, external finishes, etc.) may not be accurately represented in images vs specifications. Please review specifications and do not order based solely on images.

This sealed, all-glass 160 watt lamp produces 2350 Lux of illumination provided at 25 feet. This lamp is rated at 8 million candle power within the Larson Electronics. More interestingly, the lens is covered with a “blue eye” style coating. This coating is designed to reduce the glare on outer edges of the beam caused by fog, haze, rain, snow, etc. Combined with a focusing shield over the bulb, this blue coating improves visibility in the worst weather. Like the entire all-glass range, this lamp was designed and built for aircraft landing lights. As a result, the lamp not only produces a bright beam, but it also is completely resistant to vibration and weather related damage. This lamp is one of the most common lamps purchased for bad weather use, because it delivers the most light to the target regardless of atmospheric interference. The life of this lamp is rated at 150 hours within the Larson Electronics. Replacements lamps are readily available through Larson Electronics and www.larsonelectronics.com.
